

Journal Scope

Chalcogenide Letters (Chalcogenide Lett.) has the aim to publish rapidly papers in chalcogenide field of research and appears with twelve issues per year. The journal is open to letters, short communications and breakings news inserted as Short Notes, in the field of chalcogenide materials either amorphous or crystalline. Short papers in structure, properties and applications, as well as those covering special properties in nano-structured chalcogenides are admitted.

Papers based on chalcogenide advanced nanomaterials with possible applications in electronics, optoelectronics, and photonics are encouraged. Also, articles on alternative and renewable energy sources in the field of chalcogenides are accepted for submission.

Cross-fertilization of both crystalline and amorphous field in this special class of materials is one of the purposes of this Journal.

In starting the Chalcogenide Letters as an electronic journal, we will make every effort to publish new research results in an expedient fashion taking a maximum of 3 months from the date of submission, to make a decision.

Submissions will undergo a set review process. Submissions with a high impact in the field will be given a faster review process.
